ABSTRACT: A brief survey on aquatic plants was carried out in South Korea on June – July, 2006. The investigated aquatic communities, representing 11 sites from all over the nation, mainly on seaside coast (Fig. 1), are as follows:

1. **Salt marsh:** *Salicornia europaea* L., *Suaeda maritima* (L.) Dumort. *Triglochin maritimum* L. (Fig. 2).
2. **Brackish pond:** *Ruppia maritima* L.
3. **Beach:** *Zostera marina* L. (Fig. 3).
4. **Brackish pond:** *Zannichellia palustris* L.
5. **Freshwater pond:** *Potamogeton distinctus* A. Benn, *P. octandrus* Poir., *Utricularia australis* R. Br. (Fig. 4).
6. **Freshwater pond:** *Najas marina* L. , *Potamogeton cf. panormitanus* (Fig. 5).
7. **Freshwater pond:** *Callitriche palustris* L. *Lobelia chinensis* Lour. (Fig. 6).
8. **Freshwater pond:** *Hydrocharis dubia* (Bl.) Backer, *Trapa japonica* Flerov. (Fig. 7).
9. **Beach:** *Phyllospadix iwatensis* Makino (Fig. 8).
10. **Freshwater:** *Sparganium erectum* L.
11. **Freshwater:** *Brasenia schreberi* J. F. Gmel., *Nuphar japonicum* DC (Fig. 9).

Fig. 1. The 11 representative investigated sites in South Korea.

Fig. 2. *Salicornia europaea* and *Suaeda maritima* community.

Fig. 3. *Zostera marina* community.

Fig. 4. *Potamogeton distinctus* (large) and *P. octandrus* (tiny) community.

Fig. 5. *Najas marina* community.

Fig. 6. *Callitriche palustris* L. with fruits.

Fig. 7. *Hydrocharis dubia* and *Trapa japonica* community.

Fig. 8. *Phyllospadix iwatensis* (female).

Fig. 9. *Brasenia schreberi* and *Nuphar japonicum* community.
